

EXPERIENCE

Google — Seattle, WA

September 2026 - Present

Senior Design Engineer

- Working on Google Disco, an AI-powered browser experience, exploring how AI can transform web browsing from a collection of static pages into a task-oriented, interactive experience.

Microsoft – Redmond, WA

June 2022 - September 2026

Design Engineer

- Architected design-system component **API contracts** powering Copilot across Microsoft product surfaces; designing for token-based theming, accessibility, and reusability across independently owned hosts.
- Built and designed **42 components** adopted across M365 Copilot surfaces, owning contribution and review workflows to keep consuming products consistent with the system.
- Created a **Playwright testing infrastructure** validating every component state, property, and interaction to catch regressions before release.
- Implemented an internal **agent to reduce AI token usage 48%**, routing tasks to the best-fit model, prompting context resets, and enforcing code references over copy-paste.
- Building an **agentic design-to-code orchestrator** that turns design specs into production components, reducing handoff friction.

Software Engineer

- Led front-end engineering for **Image Creator**, a hybrid **vanilla JavaScript** and **React** web app powered by the DALL-E model, scaling to 3M+ daily users and 10B+ total generations.
- Integrated Image Creator into **Copilot** and **M365 Copilot**, extending access to 2M+ additional daily users at peak.
- Built image generation from **Bing** search results page and **Copilot Search**, enabling generative content creation directly from the search bar and driving 100K+ creations per day.
- Maintained and evolved the **C# image generation API** powering over 20 internal and external partner integrations ensuring reliability, performance, and safe model access at scale.
- Developed **enterprise-grade privacy safeguards** for image generation in M365 Copilot, aligning with regulatory standards and customer data protection requirements.
- Partnered with **Responsible AI**, legal, and policy teams, to ensure compliance with EU laws and White House **C2PA** image provenance standards.
- Onboarded and **mentored** a team of five engineers to the Image Creator tech stack, running daily office hours performing PR reviews, and maintaining internal documentation implementation.
- Built and maintained a **visual testing infrastructure** with 800+ parity checks to catch and prevent regressions in UI and interaction design.

SKILLS

Languages & Frameworks: React, JavaScript, C#, Python, HTML, CSS, C++

Design: Design Systems, Tokens, Accessibility, Figma, UX Architecture, Storyboarding, Prototyping

Research: A/B Testing, UX research, Personas, Responsible AI,

EDUCATION

Computer Science, B.S. from **University of North Carolina at Chapel Hill**
